Abdul

LevelShift

Re: Python/Node.js Developer — Remote Contract (San Ramon, CA)

Dear Abdul,

Thank you for reaching out about the Python/Node.js Developer contract opportunity with LevelShift. I am very interested in this role and would welcome the chance to move forward. Based in Temple City (Los Angeles area), I am fully available for remote work and comfortable with contract engagements in high-scale enterprise environments.

My background aligns closely with what your client needs:

- **Python & Node.js at scale:** I have 15+ years hands-on experience designing, developing, and supporting production applications in **Python** (FastAPI, Django, Flask) and **Node.js**, with deep expertise in **RESTful APIs, microservices architecture**, and performance optimization under load.
- **Full SDLC ownership:** I routinely own applications end to end — requirement analysis and design through development, **unit testing**, code review, **CI/CD deployment**, and ongoing production support. Recent engagements include Disney, CVS, and healthcare platforms where reliability and documentation are non-negotiable.
- **Databases, cloud & DevOps:** Strong proficiency in **PostgreSQL, MongoDB, and Redis**; extensive experience on **AWS and GCP**; Docker/Kubernetes containerization; and CI/CD via GitHub Actions and GitLab CI. I also have working familiarity with Jenkins-style pipeline workflows.
- **Enterprise & regulated environments:** Before my current Python/cloud focus, I spent **five years at Hospira** verifying embedded software for hospital infusion pumps (Symbiq, Plum A+) — collaborating with firmware and hardware teams, validating client/server systems, and working in FDA-regulated verification workflows. That foundation shaped how I approach testing discipline, cross-functional collaboration, and production stability today.

- **Full-stack breadth:** React.js front-end integration experience, secure API design (including HIPAA-compliant systems serving 500k+ users), and a track record of **99.99% uptime** on mission-critical enterprise backends.

I am particularly interested in learning more about the end client, expected contract duration, work arrangement (fully remote vs. hybrid), and rate structure. I am targeting senior-level contract compensation commensurate with 15+ years of experience and am happy to discuss terms that work for both sides.

My updated resume is attached. I am available for a call this week at your convenience — please let me know what works best for your schedule.

Thank you again for thinking of me for this opportunity. I look forward to hearing from you.

Sincerely,

Cary Jones

Senior Python/Node.js Developer
