

LTIMindtree — Recruiter Screening Prep

Today: Friday, Jul 31, 2026 · 2:00 PM PST (5:00 PM EST)

Interviewer: Varun Verma — Senior Specialist, Talent Acquisition

Format: Microsoft Teams (~20–30 min recruiter screen)

Join: [Teams link](#) · ID **417 954 337 900 418** · Passcode **z3Mf3uw7** · Recruiter **+1 (628) 239-0019**

What this call is (and isn't)

Talent acquisition screening — not a technical deep-dive. Varun validates fit before a hiring manager or client interview.

Expect: resume walkthrough, role/skills match, compensation, location preference, work authorization, start date, why LTIMindtree, client-staffing model.

Not expected today: live coding, system design, deep Django/AWS grilling.

Context from your application

Date	Event
Jul 27	Applied via LTIMindtree RippleHire portal
Jul 27	Arbitration consent submitted
Jul 31	Varun schedules "LTM Discussion with Cary Jones"

Gap to close: Invite does not name the role. Open with: *"Which requisition or job title does my profile map to?"*

60-second intro

Bullet cues (glance, don't read):

- **Who:** Cary Jones · Senior Software Engineer · **15+ years**
- **Core stack:** Python (FastAPI, Django, Asyncio) · REST APIs · SQL · AWS
- **Fidelity:** Django REST APIs · network automation

- **Disney:** Financial backends on AWS · **\$10M+ daily** volume
- **CGJSoftware:** Containerized microservices · ECS/Fargate · end-to-end delivery
- **Where / want:** Temple City, LA · remote or hybrid · senior backend · own features at scale

Full sentence handy if needed:

"I'm Cary Jones, a Senior Software Engineer with 15+ years building production Python backends, REST APIs, and cloud systems. My core stack is Python — FastAPI, Django, Asyncio — with deep SQL and AWS experience. At Fidelity I built Django REST APIs for network automation; at Disney I ran financial backends on AWS processing over \$10 million daily; and through CGJSoftware I've delivered containerized microservices on ECS/Fargate. I'm based in Temple City in the LA area, prefer remote or hybrid, and I'm looking for a senior backend role where I can own features end-to-end at scale."

Likely questions + your answers

1. Tell me about yourself

Use intro above, then **two** highlights (under 90 sec each):

- **Disney:** Financial backend, AWS, \$10M+ daily, 99.99% uptime
- **Fidelity:** Django REST, network automation, 4 hr → 10 min provisioning
- **CGJSoftware:** FastAPI + SQLAlchemy, ECS/Fargate, sub-100ms latency

2. Why LTIMindtree?

"LTIMindtree works with large enterprise clients on complex, long-running technology programs — that's where my backend and cloud experience fits best. I'm interested in client-facing delivery teams where Python, APIs, and AWS are central, with room to grow into technical leadership."

3. Why leave CGJSoftware?

"CGJSoftware was my vehicle for independent consulting across healthcare, finance, and e-commerce. I'm now looking to join a larger organization with a dedicated engineering team, structured career path, and long-term client engagements."

4. Expected compensation?

Known cap: \$63/hr max (~\$131K @ 2,080 hrs) — ~\$24K below your \$155K target (~\$74–75/hr).

Bullet cues:

- **Your target:** \$155K base (~\$74–75/hr equivalent)

- **Their cap:** \$63/hr — acknowledge the band
- **Gap:** ~\$11–12/hr — hard cap or flex?
- **Clarify:** W2 vs contract? Benefits, PTO? FTE conversion?
- **Tradeoff:** strong client + remote might soften gap; weak fit → pass early

If they ask:

*"For senior backend roles I'm targeting around **\$155K base**, or roughly **\$74–75/hour** on contract. I understand this role tops out around **\$63/hour** — there's still a gap, but I wanted to learn more about the client and scope. Is that a firm cap, or is there flexibility? I'd also want to understand the full package: W2 vs contract, benefits, and whether there's a conversion path."*

If the cap is firm: stay polite, learn client/stack, decide after — don't commit on the spot.

5. Work authorization

Answer factually. Do **not** give SSN last-4 or DOB on a recruiter screen unless there's a formal portal.

6. Location / remote / travel

*"I'm in Temple City, CA. **Remote is my first preference**. Open to **hybrid in LA** or occasional travel. I'd need to understand onsite expectations before committing to fully onsite outside LA."*

7. Availability

*"I can start within **2 weeks** of an offer, possibly sooner. I have other processes in flight but nothing that would block an agreed start date."*

8. Role targeting

"Senior backend or full-stack-leaning-backend: Python, API design, SQL, AWS, microservices. I also bring Scrum Master experience. Less interested in pure frontend or DevOps-only roles."

9. Client / project model (LTM-specific)

Follow-ups if they describe client placement:

- End client (if shareable)?
 - W2 vs subcontractor?
 - Contract length / conversion?
 - Team size and tech stack?
-

Strongest match themes

Theme	Proof point
Python backend	15+ yrs; FastAPI, Django, Flask, Asyncio
REST / microservices	Fidelity DRF, CGJSoftware ECS services
SQL / data	PostgreSQL, Azure SQL, Alembic, ETL pipelines
AWS cloud	Disney financial backend, ECS/Fargate, S3, RDS
Agile / delivery	Scrum Master; CVS monolith modernization
Enterprise scale	2.5M daily API requests; HIPAA (Alan Health)

Secondary: PDF/Excel/CSV ingestion, Pydantic, Pandas (if data/reconciliation role).

Gaps (if asked): Teradata, heavy Angular, Selenium — pivot to Python backend depth.

Questions to ask Varun (pick 3–4)

1. Which specific role or requisition is this for?
 2. End client — remote, hybrid, or onsite?
 3. Full-time W2 with LTIMindtree, or contract?
 4. Interview process after today — how many rounds?
 5. Tech stack — Python framework, cloud, database?
 6. Compensation band?
 7. Expected start date and project duration?
-

Logistics checklist

- ☐ Join Teams at **1:55 PM PST**
 - ☐ Resume PDF open
 - ☐ Quiet room, good lighting
 - ☐ Phone silent
 - ☐ Notepad for client name, comp, next steps
-

Red flags / stay sharp

- **Vague client** — push for clarity before technical rounds

- **SSN/DOB pressure** — defer to official portal
 - **Below-market comp** — \$63/hr cap (~\$131K); ~\$24K under \$155K target — proceed only if client/remote/conversion justify
 - **100% onsite far from LA** — clarify early
 - **Arbitration** — already submitted Jul 27; note any new docs
-

Bonus: if they pivot technical

Topic	One-liner
Django N+1	<code>select_related</code> / <code>prefetch_related</code> ; Debug Toolbar or APM
AWS deploy	ECS Fargate, Docker, ALB health checks, CloudWatch
API design	OpenAPI, Pydantic, versioning, idempotency keys
CI/CD	GitHub Actions, pytest gate, blue/green ECS
Python async	Asyncio for I/O; <code>sync_to_async</code> for ORM in async views
