**To:** Hiring Team & Engineering Leadership

**Company:** BlueCargo

**Position:** Senior / Staff Backend Engineer

Dear BlueCargo Hiring Team,

I am writing to express my strong enthusiasm for the **Senior / Staff Backend Engineer** position at BlueCargo. As a Senior Engineer with over 15 years of software development experience—including deep expertise in **Python, Django, PostgreSQL, and AWS (Lambda, RDS, S3)**—I am inspired by BlueCargo’s mission to bring visibility, transparency, and audit automation to global supply chains.

Throughout my career, I have specialized in building robust backend microservices and high-throughput data pipelines that turn fragmented data into real-time actionable intelligence. Having run my own technical consulting business and led engineering initiatives across fast-paced environments, I bring the self-driven, entrepreneurial problem-solving mindset that BlueCargo seeks as you scale your technology platform.

Key highlights of how my background aligns with your backend requirements include:

- **Deep Python & Django Stack Expertise:** 15+ years of Python development, including building production Django and FastAPI backends, designing database schemas, and writing clean, maintainable code.
- **Cloud & Data Pipelines at Scale:** Extensive hands-on experience designing cloud architecture on **AWS (Lambda, RDS, S3)** and PostgreSQL databases processing over **2.5 million daily events** with high reliability and low latency.
- **Quality & Agile Execution:** Demonstrated commitment to automated CI/CD (CircleCI), thorough unit and system testing, and cross-functional collaboration with product managers, data scientists, and engineers to translate complex product goals into low-defect releases.

As a Southern California resident (Los Angeles area), I am ideally situated for your preferred remote/LA location profile. I would welcome the opportunity to discuss how my backend engineering experience can help BlueCargo evolve its architecture, eliminate freight inefficiencies, and define the future of data-driven logistics.

Thank you for your time and consideration.

Warm regards,

**Cary Jones** Senior Software Engineer
