Engineering Hiring Team

Virta Health

Re: Senior Software Engineer II (Remote, U.S.)

Dear Virta Health Engineering Team,

I am writing to express my strong interest in the Senior Software Engineer II role on your data engagement platform. Virta's mission to reverse metabolic disease — and the engineering challenge of turning partner data into trusted eligibility and member outreach — is exactly the kind of high-stakes, correctness-first backend work I want to do next.

My experience aligns with your must-haves:

- **Data-intensive backend systems:** I have built event-driven pipelines processing 2.5M+ daily transactions at 99.95% accuracy, with explicit schemas, idempotent processing, reconciliation, and observability across PostgreSQL, Redis, and external APIs on AWS ECS/Fargate.
- **Healthcare and regulated workflows:** At Alan Health & Science I architected HIPAA-compliant Python REST APIs serving 500k+ user profiles. Earlier at Hospira I spent five years in regulated medical device verification — I understand auditability, provenance, and why deterministic controls matter.
- **Partner-facing integrations:** Experience building REST APIs, automated validation, webhook-style event flows, and B2B data exchanges for enterprise and healthcare clients.
- **Ownership and technical leadership:** 15+ years operating at senior level — from architecture through on-call — with a proactive, self-directed approach honed as a technical lead, consultant, and Scrum Master.
- **AI-augmented engineering:** I use Cursor and Copilot daily to accelerate development and test generation while maintaining code review standards and deterministic test coverage for correctness-critical paths.

I am based in California, available remote within the United States, and the posted compensation range aligns with my expectations. I would welcome the opportunity to help Virta build the trusted data path from raw partner records to life-changing member outreach.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Software Engineer
