Atticus Engineering — Representation Pod

Atticus

Re: Senior Backend Engineer — Representation (Remote)

Dear Atticus Engineering Team,

I am applying for the Senior Backend Engineer role on the Representation Pod. Atticus's mission — tearing down barriers between people in crisis and the aid they deserve — resonates deeply with my experience building backend systems where reliability and user trust are non-negotiable, especially in healthcare and regulated environments.

Why I'm a strong match for the Rep Pod:

- **Backend ownership end-to-end:** 15+ years designing scalable APIs, data models, and production services on AWS and GCP — from architecture through on-call, with a track record of 99.99% uptime on enterprise backends.
- **Regulated, complex workflows:** Architected HIPAA-compliant Python REST APIs serving 500k+ profiles at Alan Health; five years in regulated medical device verification at Hospira — I understand the rigor required when people's wellbeing depends on your systems.
- **Product partnership, not just tickets:** I shape requirements with PMs and designers, bring opinions on tradeoffs, and have delivered 0-to-1 products as a consulting technical lead — the same builder mindset your Rep Pod needs for greenfield legal tooling.
- **Mentorship & team growth:** Scrum Master and technical lead experience mentoring engineers on backend patterns, testing, and operational excellence.
- **Go / GCP ramp:** Python is my primary production depth; I have Go experience and am eager to deepen Golang, Kubernetes, and Terraform work on a team that values architecture and long-term system health.

I would welcome the opportunity to help Atticus build the backend foundation that helps attorneys deliver consistent, effective representation — and ultimately helps more Americans access life-changing aid.

Thank you for your consideration.

Sincerely,

Cary Jones

Senior Backend Engineer
