Rodrigo Viera

Head of Delivery

InterEx Group

Re: Technical Lead – Python / Full-Stack Engineering (Microsoft Public Sector)

Dear Rodrigo,

Thank you for reaching out about the Microsoft public-sector Technical Lead opportunity. I am very interested. The combination of hands-on Python delivery, architecture ownership, and mission-driven stakeholder work aligns closely with how I have operated throughout my career.

Relevant experience:

- **Technical Lead + production engineer:** As Principal Consultant at CGJSoftware and technical lead on prior engagements, I own architecture and design reviews while writing substantial production code — not a roadmap-only role.
- **Python / FastAPI / PostgreSQL:** Deep production use of FastAPI, Django, REST APIs, SQLAlchemy-style ORM patterns, and PostgreSQL optimization — including Disney financial backends at 99.99% uptime and reconciliation automation (8 hr → 45 min).
- **Full-stack delivery:** Built and deployed containerized Python, React, and Node.js applications; API-first backends integrated with modern frontends. Primary depth is backend; comfortable contributing across the stack.
- **Secure, regulated environments:** HIPAA healthcare APIs (OAuth2/JWT, encryption, 500k+ users), enterprise finance, and medical-device verification — accustomed to careful communication, documentation, and hierarchy in sensitive contexts.
- **Platform:** Docker/Kubernetes, AWS/GCP, CI/CD pipelines, mentoring, and code review culture. Eager to apply the same discipline on Azure DevOps and Entra ID patterns.

I am fully remote in the US (Pacific time), available to start quickly, and can engage through January 2027 and beyond. As a U.S. Marine Corps veteran, I bring mature communication and mission focus to public-sector delivery.

My CV is attached. Best number to reach me: **(626) 272-2567**. I welcome a conversation at your convenience.

Best regards,

Cary Jones

Technical Lead

Python & Full-Stack Engineering
