Engineering Hiring Team

Pipe

Re: Senior Backend Engineer (Remote)

Dear Pipe Engineering Team,

I am writing to express my strong interest in the Senior Backend Engineer role at Pipe. I am drawn to remote-first teams that hold a high bar and give engineers end-to-end ownership — and to building the APIs and data systems behind capital products where reliability and correctness matter.

My background maps closely to your stack and responsibilities:

- **Python + PostgreSQL in production:** 15+ years building backend services with FastAPI and Django, designing relational schemas, optimizing queries, and operating APIs at scale — including custom ORM work that cut boilerplate by 50% and improved execution time by 28%.
- **Capital- and finance-adjacent systems:** At Disney I engineered financial backends processing \$10M+ in daily transaction metrics at 99.99% uptime and co-built reconciliation automation that cut batch runtime from 8 hours to 45 minutes. At CT-REI I built investment evaluation and financial tracking platforms.
- **Cloud-native APIs:** Hands-on with AWS (ECS, Fargate, RDS, Lambda) and GCP — containerized microservices, event-driven pipelines handling 2.5M+ daily transactions, and CI/CD with automated testing.
- **Go:** Proficient in Go as a polyglot backend engineer; my deepest production track record is Python, and I am excited to contribute across Pipe's Go and Python services.
- **Leadership and collaboration:** Experienced leading projects from concept to launch as a technical lead and Scrum Master — code reviews, cross-functional requirements with product and finance teams, and mentoring engineers.

As an honorably discharged U.S. Marine Corps veteran, I bring disciplined ownership and clear communication to remote engineering. I would welcome the opportunity to help

Pipe scale the backend systems powering your capital products.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Backend Engineer
