

Virta Health — Veton AI Screen Prep

Role: Senior Software Engineer II — Data Engagement Platform

Format: Phone interview with Emma (Veton AI) · ~20–30 min

Comp: \$176.5K–\$228K · Remote U.S.

Start interview: [Veton reset link](#) · Phone **(626) 272-2567** · Support: hello@veton.ai

AI interview rules: Prep with AI is OK. During the live call — your own voice, no reading scripts, no live coaching. Virta will ask about practical AI tool use. Humans review the transcript.

What this call is

Recruiter-style AI screen — background, role fit, healthcare/data experience, AI tooling judgment. Not live coding.

Role focus: Partner data → eligibility decisions → campaign-ready member audiences (Member Marketing + Coverage Eligibility).

60-second intro — bullet cues

- **Who:** Cary Jones · Senior Software Engineer · **15+ years**
- **Focus:** Event-driven **data platforms**, partner integrations, healthcare/regulated systems
- **Virta fit:** Partner data → eligibility + member audiences
- **Alan Health:** HIPAA APIs · **500k+** profiles · identity/eligibility workflows
- **CGJSoftware:** Event-driven ETL · **2.5M/day** · idempotency · reconciliation · 99.95%
- **AI stance:** Cursor/Copilot for velocity · deterministic controls for correctness
- **Why Virta:** Mission + correctness-first data systems for member outreach

Likely questions + answers

1. Why Virta / why this role?

"Virta's data engagement platform turns partner records into trusted eligibility and outreach — that's high-stakes, correctness-first backend work. I've built HIPAA-compliant systems and

event-driven pipelines at scale, and I want that impact on a mission I care about: reversing metabolic disease."

2. Relevant data platform experience

- **Data contracts:** Pydantic schemas, versioned formats, fail-fast validation
- **Idempotency:** Dedup keys, safe replays on at-least-once delivery
- **Reconciliation:** Source vs destination counts, quarantine bad rows, alert on drift
- **Partner/B2B:** File + API ingestion, webhook pipelines, observability end-to-end
- **Regulated:** Audit trail, provenance, consent/suppression concepts

3. Disney / healthcare stories (STAR)

Story	Metric
Alan Health HIPAA REST APIs	500k+ user profiles
CGJSoftware event-driven ETL	2.5M/day · 99.95% accuracy
Disney batch reconciliation	8 hr → 45 min · 99.99% uptime

4. AI-assisted development (Virta will ask)

- **Use AI for:** Tests, boilerplate, docs, data mapping exploration, refactors
- **Don't:** Ship unreviewed AI code on correctness-critical paths
- **Controls:** pytest gates, human review, deterministic validation on ingest
- **Result:** +35% delivery speed · coverage 65% → 92%

5. CGJSoftware — address directly

"CGJSoftware was my consulting entity for enterprise backend and data contracts — active delivery, not a gap. I'm moving to W2 to join a product team building long-term healthcare data platforms."

6. Golang gap (if asked)

"Production depth in Python; comfortable adopting Go for services. Same fundamentals — APIs, events, idempotency, observability. Strong GCP/SQL overlap with your stack."

Match themes vs JD

JD need	Your proof
Event-driven integrations	ECS/Fargate pipelines, Pub/Sub-style messaging
Identity, eligibility, dedup	Alan Health, partner data validation
Observability & reconciliation	2.5M/day pipelines, 99.95% accuracy
Regulated auditability	HIPAA, provenance, replay patterns
AI-augmented engineering	Cursor/Copilot + deterministic controls
GCP / BigQuery / dbt	GCP exposure; SQL/PostgreSQL depth — eager on dbt

Virta mission one-liner

"Virta reverses type 2 diabetes through virtual care and nutrition — I want to build the data systems that make member outreach accurate and trustworthy."

Questions to ask (if prompted)

1. How does the data engagement platform split Member Marketing vs Coverage Eligibility?
2. Event-driven vs file-based — what's the modernization roadmap?
3. Go vs Python split on the team?
4. What does the interview process look like after this screen?

Logistics checklist

- ☐ Strong cell signal — use reset link (not old 62c180f8 link)
- ☐ Quiet room · phone on Do Not Disturb
- ☐ Resume PDF open on second screen
- ☐ Speak naturally — bullets, not scripts
- ☐ If disconnected: wait 30 sec, retry link once, then hello@veton.ai

Do / Don't

Do	Don't
----	-------

Use specific metrics	Read verbatim from screen
Emphasize correctness + healthcare	Apologize for Python-over-Go
Pause 1–2 sec before answering	Multitask during call
Mention AI tools with guardrails	Invent experience
