Engineering Hiring Team

AnySignal

Re: Python Software Engineer — Los Angeles

Dear AnySignal Engineering Team,

I am writing to express my interest in the Python Software Engineer role at AnySignal. Your focus on test automation, data aggregation, and rapid iteration across hardware and software systems aligns closely with how I have worked throughout my career — from building reusable Python frameworks for engineering teams to five years verifying embedded device software in regulated environments at Hospira.

My experience maps to your needs in several areas:

- **Python frameworks and libraries:** 15+ years developing production Python (FastAPI, Django, Flask) including extensible internal libraries, pytest harnesses, and CI/CD-integrated test automation used across multiple projects.
- **Data aggregation and databases:** Designed PostgreSQL schemas and event-driven pipelines processing 2.5M+ daily transactions at 99.95% accuracy; hands-on with Redis, MongoDB, and scalable relational data models.
- **Test automation and device-adjacent integration:** At Hospira I spent five years in requirements-based verification, hospital network integration, and debug tooling for infusion pump systems — formal test procedures, protocol-level triage, and cross-disciplinary engineering workflows.
- **Docker, networking, and infrastructure:** Containerized Python services on AWS ECS/Fargate with sub-120ms API latency; U.S. Marine Corps communications background plus enterprise network automation experience at Fidelity.

I am based in the Los Angeles area, available for on-site work, and excited by AnySignal's mission in space and defense RF systems. I would welcome the opportunity to discuss how I can contribute to your data aggregation and automation platform.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Python Software Engineer
