Engineering Hiring Team

Honor Technology

Re: Senior Backend Engineer (Remote)

Dear Honor Engineering Team,

I am writing to express my strong interest in the Senior Backend Engineer role at Honor. Honor's mission to change how society cares for older adults resonates deeply with me — I have spent years building backend systems where reliability, data integrity, and security directly affect people's lives, from HIPAA-compliant healthcare platforms to regulated medical device environments.

My experience maps closely to what you're looking for:

- **Python production systems:** 15+ years building Python backends with Django, FastAPI, and REST APIs — including Django REST Framework services at Fidelity and containerized microservices on AWS ECS/Fargate with sub-120ms latency.
- **APIs, distributed systems, and databases at scale:** I have designed relational PostgreSQL schemas, optimized query performance, and built event-driven pipelines processing 2.5M+ daily transactions at 99.95% accuracy across PostgreSQL, Redis, and external services.
- **AWS and service-oriented architecture:** Hands-on experience with ECS, Fargate, RDS, Lambda, CloudWatch, and Secrets Manager — operating production services at 99.99% uptime on AWS at Disney.
- **Healthcare domain:** At Alan Health & Science I architected secure Python REST APIs for HIPAA-compliant platforms serving 500k+ user profiles. Earlier at Hospira I spent five years in regulated medical device verification — I understand what it means to build software where failure is not an option.

I thrive in remote-first, cross-functional teams and bring clear communication honed as a Scrum Master and technical lead. As an honorably discharged U.S. Marine Corps veteran, I take ownership seriously — from design through production support.

I would welcome the opportunity to help Honor scale the technology behind home care for millions of families. Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Backend Engineer
