Re: Senior Python Backend Engineer — Django / AWS

Dear Cisco Hiring Team,

I am writing to express my strong interest in the Senior Python Backend Engineer role supporting Cisco's engineering team. With 15+ years building production Python backends — including direct experience with **Django REST Framework**, **AWS ECS/Fargate**, and enterprise-scale PostgreSQL systems — I am well positioned to contribute immediately to backend services that demand reliability, performance, and clean architecture.

My background aligns closely with the technical requirements of this engagement:

- **Django & REST APIs:** At Fidelity Investments I built Django REST Framework services that automated datacenter network device configuration, cutting provisioning time from 4 hours to 10 minutes and reducing manual errors by 95%. I owned API contract design, custom serializers, permissions, and pytest test coverage.
- **AWS at enterprise scale:** At Disney I engineered Python backend modules for financial systems processing \$10M+ in daily transactions, maintaining 99.99% uptime on AWS. Through CGJSoftware I have deployed containerized Django and FastAPI microservices on ECS/Fargate with sub-120ms API latency.
- **Production operations:** I have managed the full lifecycle — database schema design, zero-downtime migrations, Redis caching, CloudWatch monitoring, Secrets Manager credential injection, and CI/CD pipelines with automated test gates.
- **Legacy modernization:** At CVS I decoupled monolithic Python codebases for domain-driven microservices migration, improving integration test speed by 50% — experience directly applicable to evolving enterprise Django platforms.

I also have an early-career connection to Cisco technology: at Hospira I built enterprise wireless security test infrastructure using Cisco ACS and FreeRadius for regulated

medical device verification — giving me firsthand appreciation for Cisco's platform reliability standards in mission-critical environments.

As an honorably discharged U.S. Marine Corps veteran, I bring disciplined ownership, clear communication, and accountability to every team I join. I am excited about the opportunity to bring my full-stack backend expertise into a dedicated enterprise team at Cisco and would welcome the chance to discuss how my experience can support your engineering goals.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Python Backend Engineer
