Engineering Team

First Resonance

Re: Staff Software Engineer

Dear First Resonance Hiring Team,

I am writing to express my strong interest in the Staff Software Engineer role building the ION Factory OS. The opportunity to split time between scaling production backend code and optimizing the AWS infrastructure that supports it — while helping power manufacturing for rockets, satellites, and next-generation hardware — is exactly the kind of systems-level engineering work I find most rewarding. I am a coding-heavy backend engineer who owns architecture end to end, not a configuration-only operator.

My background aligns closely with what you're building:

- **Backend code + cloud infrastructure:** For 15+ years I have shipped production **Python** services (FastAPI, Django, Flask) while owning the **AWS environments** they run on — ECS, Fargate, Lambda, RDS, EC2, S3 — bridging application design and platform architecture so delivery stays fast and reliable.
- **Reliability and performance at scale:** At Disney I maintained enterprise backend systems at **99.99% uptime** processing **\$10M+ in daily metrics**. I have engineered event-driven pipelines handling **2.5M+ daily transactions**, optimized PostgreSQL workloads, and led initiatives that cut batch processing from **8 hours to 45 minutes**.
- **Building leverage for teams:** I create paved roads — CI/CD pipelines, reusable service patterns, ORM abstractions, and engineering standards — that let product teams ship faster with less risk. I raised automated test coverage from **65% to 92%** while accelerating feature delivery by **35–40%**.
- **Staff-level leadership:** As Principal Consultant and Technical Lead, I produce architecture assessments, prioritize hardening work, mentor engineers, and lead high-impact initiatives across complex codebases — the same profile your first 90 days describe.

I am drawn to First Resonance because ION Factory OS is genuine platform software with hard-tech customers who depend on it — not another CRUD app. I bring deep distributed systems experience, hands-on AWS ownership, and an operational mindset forged in mission-critical environments, including service as a U.S. Marine Corps communications specialist where uptime was non-negotiable.

I would welcome the opportunity to discuss how I can help scale ION's backend, strengthen your hub engineering team, and deliver the architecture roadmap and reliability wins your Staff role is designed to produce.

Sincerely,

Cary Jones

Staff Software Engineer
