Engineering Hiring Team

Lyra Health

Re: Sr. Software Engineer (Remote, U.S.)

Dear Lyra Health Engineering Team,

I am writing to express my strong interest in the Sr. Software Engineer role at Lyra Health. Lyra's mission to deliver evidence-based mental health care at scale — and the engineering behind Lyra Empower — aligns with the kind of work I want to do: building Python APIs where security, reliability, and quality directly improve people's lives.

My background maps closely to what you're looking for:

- **Python REST APIs at scale:** 15+ years developing production Python backends with Django, FastAPI, and Django REST Framework — including APIs at Fidelity that cut network provisioning from 4 hours to 10 minutes, and containerized services on AWS ECS/Fargate with sub-120ms latency.
- **Multi-tenant web applications:** At Alan Health & Science I architected HIPAA-compliant Python REST APIs serving 500k+ user profiles, with OAuth2, relational schema design, and 99.9% production availability.
- **Security and best practices:** Experience in regulated healthcare and medical device environments (Hospira) where security standards and formal quality processes are non-negotiable — I bring that discipline to every phase of development.
- **Cross-functional collaboration:** Proven partner to product and data teams as a technical lead and Scrum Master; self-starter who drives API design from requirements through deployment and monitoring.

I am based in Temple City, California, available fully remote within the United States, and the posted compensation range aligns with my expectations. I would welcome the opportunity to help Lyra build the APIs that power life-changing mental health care.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Sr. Software Engineer
