Re: Python/Node.js Developer — Remote Contract

Dear Abdul,

Thank you for reaching out about the Python/Node.js Developer contract opportunity. I am very interested in this role and believe my background is a strong match for building and maintaining scalable applications with full SDLC ownership in a remote, high-scale enterprise environment.

Here is how my experience aligns with the position:

- **Python & Node.js at scale:** I have 15+ years hands-on experience designing, developing, and supporting production applications in **Python** (FastAPI, Django, Flask) and **Node.js**, with deep expertise in **RESTful APIs** and **microservices architecture**.
- **Full SDLC ownership:** I routinely own applications end to end — requirements and design through development, **unit testing**, code review, **CI/CD deployment**, and ongoing production support — across consulting and enterprise engagements at Disney, CVS, and healthcare platforms.
- **Databases & cloud:** Strong proficiency in **PostgreSQL, MongoDB, and Redis**, with extensive deployment experience on **AWS and GCP**, plus Docker/Kubernetes containerization and GitLab CI/GitHub Actions pipelines.
- **Enterprise reliability:** I build secure, scalable systems with disciplined performance optimization — including platforms at **99.99% uptime** processing millions of daily transactions.

I am based in the Los Angeles area, available for remote work, and comfortable collaborating with cross-functional teams on requirement analysis, design decisions, and system integration. I would welcome the opportunity to learn more about the end client, contract duration, and next steps in the process.

Thank you for your time — I look forward to hearing from you.

Sincerely,

Cary Jones

Senior Python/Node.js Developer
