Cover Letter for AI Software Engineer Position

Dear Hiring Manager,

I am writing to express my interest in the AI Software Engineer position at NextEra Energy. With extensive experience in cloud-based delivery on AWS and GCP, and a proven track record in integrating legacy and modern systems, I am confident in my ability to contribute effectively to your team.

My experience includes architecting and operating containerized Python services on AWS ECS/Fargate, achieving 99.99% uptime for Disney financial reporting systems, and deploying applications to GCP with a 3× improvement in release frequency. At CVS, I analyzed and decoupled monolithic codebases for microservices migration, and at Dell, I refactored legacy Python test frameworks. My ongoing consulting work includes maintaining legacy systems while shipping new cloud-native features.

In addition to my technical skills, I am adept at collaborating with product and business stakeholders to ship features quickly in regulated, high-stakes environments such as healthcare and finance. As a Scrum Master and technical lead, I have partnered directly with stakeholders to deliver high-impact solutions.

I am based in Temple City, CA, and am available for remote work during CST core hours (9 AM–3 PM). I would love to learn more about the team and discuss how I can contribute to NextEra Energy's success.

Thank you for considering my application. I look forward to the opportunity to discuss my candidacy further.

Best regards,
Cary Jones
