Application for Senior Full Stack Developer Position

Dear Ashu Tyagi,

I am writing to express my interest in the Senior Full Stack Developer position at Seneca Resources, as advertised. With over 15 years of experience in software engineering and a strong background in full stack development, I am excited about the opportunity to contribute to your team and help drive modern cloud-native application development initiatives.

Throughout my career, I have demonstrated expertise in Python and JavaScript, leveraging frameworks such as Django, Flask, and FastAPI to build scalable and high-performance applications. My experience with AWS and cloud-native applications, combined with my proficiency in microservices, APIs, CI/CD, Docker, and Kubernetes, aligns well with the requirements of this role.

In my recent role as a Principal Software Engineering Consultant at CGJSoftware, Inc., I successfully architected and deployed containerized microservices on AWS, enhancing system throughput by 45% and reducing API latency significantly. I am also adept at integrating modern AI development tools and LLMs, which I believe could greatly benefit your team's success.

I am particularly drawn to this role because of the opportunity to collaborate with architects and product teams to design and build scalable AWS-based applications. I am confident that my skills and experience make me a strong candidate for this position, and I am eager to bring my expertise to Seneca Resources.

Thank you for considering my application. I look forward to the possibility of discussing this exciting opportunity with you. Please feel free to contact me at your earliest convenience to schedule a conversation.

Sincerely,

Cary Jones
