SentiLink Data Platform Hiring Team

SentiLink

Re: Senior Software Engineer, Data Platform (Remote, U.S.)

Dear SentiLink Engineering Team,

I am applying for the Senior Software Engineer, Data Platform role. SentiLink's mission — replacing a clunky identity verification status quo with APIs that are faster and more accurate — aligns with my experience building high-throughput, accuracy-critical data pipelines in regulated environments.

- **ETL/ELT at scale:** Built event-driven Python pipelines on AWS handling 2.5M+ daily transactions at 99.95% accuracy, with monitoring, idempotent processing, and automated test coverage.
- **Data performance:** Cut Disney financial batch reconciliation from 8 hours to 45 minutes through PostgreSQL optimization and pipeline redesign; optimized Redshift reporting queries 38%.
- **AWS data stack:** Production experience with ECS/Fargate, Lambda, RDS/PostgreSQL, S3, async queues, Docker, and on-call ownership at 99.99% uptime.
- **Quality & mentorship:** HIPAA-compliant data access at Alan Health; mentor engineers on observability, reliability, and data quality standards.

My primary depth is Python on AWS; I am eager to deepen Spark/EMR and streaming patterns on a team where data accuracy directly powers fraud detection products.

Thank you for your consideration.

Sincerely,

Cary Jones

Senior Software Engineer
