Weave Engineering Hiring Team

Weave

Re: Senior Backend Engineer — Remote, U.S.

Dear Weave Engineering Team,

I am applying for the Senior Backend Engineer role. Weave's mission — helping healthcare practices run more efficiently so clinicians can focus on patient care — aligns closely with my experience building reliable backend systems in health-adjacent, regulated environments.

Why I'm a strong match:

- **Healthcare backend at scale:** Architected HIPAA-compliant Python REST APIs serving 500k+ profiles; five years in regulated medical device verification at Hospira — I understand the rigor healthcare platforms require.
- **APIs & distributed systems:** 15+ years designing RESTful services, event-driven pipelines (2.5M+ daily transactions), PostgreSQL, Redis, and async inter-service communication on AWS and GCP.
- **Production ownership:** I own services from design through on-call — 99.99% uptime on enterprise backends, observability-minded delivery, and mentoring peers on reliability practices.
- **Cross-functional delivery:** Experienced partnering with product and frontend teams remotely across U.S. and international time zones; outcome-oriented from project inception through production.
- **Golang ramp:** My primary strength is Python backend architecture; I have Go experience and am eager to deepen Golang microservices work in a team that values system design and long-term health.

I would welcome the opportunity to help Weave scale the backend platform powering patient experience for 40k+ healthcare practices.

Thank you for your consideration.

Sincerely,

Cary Jones

Senior Backend Engineer
