

NextEra Energy — Screening Interview Prep

Wed Aug 12, 2026 · 9:00 AM PST (11:00 AM CST)

Interviewer: Michael Gonzales · US Tech Solutions

Role: Senior Software Developer / AI SWE · NextEra Energy

Format: Zoom · ID **878 7490 9214** · Passcode **X7ZHUn**

Pre-flight: [Zoom join](#) · Michael Gonzales michael.gonzales@ustechsolutions.com · Recruiter Riyaz@ustechsolutions.com · Resume: [applications/nextera/resume.pdf](#) · Core hours: **9 AM–3 PM CST = 7 AM–1 PM Pacific**

Role reality

Title says **AI**, but JD emphasizes **backend** · **cloud** · **SQL** · **legacy modernization**. AI is a **bonus**.

Your pitch: "Senior backend/cloud engineer who modernizes legacy systems and ships production features. AI accelerates delivery — not the headline."

60-second intro

- Cary Jones · Senior SWE · **15+ years**
- Python (FastAPI, Django) · PostgreSQL · AWS/GCP · legacy → microservices
- **Disney:** financial backends · \$10M+ daily · 99.99% uptime
- **CVS:** monolith decoupling · microservices path
- **Fidelity:** Django REST · 4 hr → 10 min provisioning
- **AI bonus:** Cursor/Copilot · LLM doc pipelines · pragmatic only
- Temple City CA · available **7 AM–1 PM Pacific**

"I'm Cary Jones, a Senior Software Engineer with 15 years building Python backends, SQL systems, and cloud services on AWS and GCP. I've modernized legacy monoliths at CVS, ran Disney financial backends at 99.99% uptime, and built Django REST APIs at Fidelity. I work independently with product teams in regulated environments and use AI tooling pragmatically. I'm remote in LA, available for CST core hours, and excited about serious infrastructure software at NextEra — not buzzword AI."

Top screening Q&A

Why NextEra?

Critical infrastructure + modern software — high reliability, long-lived systems, real impact. Role matches cloud, SQL, legacy modernization. Regulated enterprise background fits.

Legacy + modern?

CVS: monolith analysis, DDD boundaries, Docker integration tests. Dell: legacy Python framework refactor, 80% fewer crashes. Consulting: legacy + ECS/Fargate greenfield in parallel.

SQL depth?

PostgreSQL — schema, indexes, optimization. Disney reconciliation batch 8 hours → 45 minutes via SQL aggregation + pipeline redesign.

AI? (keep short)

LLM doc classification, Cursor/Copilot, LangChain workflows. Engineer who applies AI practically — not ML research.

No energy domain?

Closest: Disney finance, HIPAA healthcare — regulated, high uptime, auditability. Ramp quickly on domain when engineering fundamentals align.

Schedule?

7 AM–1 PM Pacific for 9–3 CST core. Flexible async + urgent prod issues outside window.

Rate?

Through US Tech / Riyaz. Target senior contract ~\$74–75/hr equivalent. Understand full package before committing.

Match themes

Theme	Proof
Python backend	15+ yrs · FastAPI, Django
SQL	Reconciliation 8h→45m · Disney · Fidelity
AWS	ECS/Fargate · 99.99% uptime
Legacy	CVS monolith · Dell refactor
Product delivery	Scrum Master · Alan Health HIPAA

Ask Michael (pick 4–5)

1. What team/initiative and first problem to solve?
2. Stack — Python, cloud, DBs, legacy in scope?
3. Greenfield vs legacy migration split?
4. Where does AI show up in production today?
5. Success in first 90 days?
6. Next interview steps?

Light technical one-liners

Topic	Answer
Monolith → services	Domain boundaries · strangler · no big-bang
Slow SQL	EXPLAIN ANALYZE · indexes · batch aggregation
AWS	ECS Fargate · Docker · CloudWatch · Secrets Manager
Legacy safety	Analysis first · integration tests · rollback plan

Logistics

- ☐ Ready **8:55 AM PST** Wed Aug 12
- ☐ Resume PDF open
- ☐ Quiet room · good mic · notepad
- ☐ Thank-you + update Riyaz after call

Red flags: Pure ML research role · vague legacy scope · SSN/DOB on phone — defer to US Tech portal
