

Cisco / TCS — Interview Cheat Sheet

Cary Glenn Jones · Python / Django / AWS · Keep open beside resume

INTRO — BULLET POINTS

- Thanks for having me — **Cary Glenn Jones**, Senior Software Engineer, **Python backend / APIs**
- Stack: **Django, Django REST Framework, FastAPI, AWS**
- **Fidelity**: Django REST backend + web API that **automated datacenter network device configuration**; UI so engineers could use it
- **Disney: Financial & reporting apps; accounting costing system; Python → PostgreSQL**; ETL across **Jira, Airtable**, Redis, REST APIs
- **Hospira**: Wireless security testing with **Cisco ACS** + FreeRadius for medical devices
- Excited to bring this **Django + AWS** experience to **Cisco** today

SHORT VERSION (~20 SEC)

I'm Cary Glenn Jones — 15+ years on Python backends, **Django/DRF and AWS**. At Fidelity I built a Django REST API for network device automation; at Disney I worked on financial reporting, PostgreSQL, and ETL with Jira and Airtable. I also used **Cisco ACS** at Hospira. Excited to be here.

QUESTIONS TO ASK THEM

1. How is the Django codebase structured today — monolithic, or split into microservices on AWS?
2. What does the production deployment pipeline look like (CI/CD, testing gates, ECS rollouts)?
3. What are the biggest scalability or performance bottlenecks the backend team is focused on right now?
4. How is day-to-day collaboration structured between TCS and Cisco engineers on this team?
5. What would success look like for someone in this role in the first 90 days?
