NextEra Energy Client Engagement

Re: AI Software Engineer — NextEra Energy (Remote, 12+ months)

Dear Mr. Riyaz,

Thank you for reaching out about the AI Software Engineer contract with NextEra Energy. I am very interested. Your description aligns well with how I work: strong backend and cloud delivery first, with AI as a practical accelerator—not the headline skill.

With 15+ years building production software, I bring the core capabilities your client is prioritizing:

- **Cloud-based delivery on AWS and GCP:** I have architected and operated containerized Python services on AWS ECS/Fargate at 99.99% uptime (Disney financial reporting) and deployed applications to GCP with a 3x improvement in release frequency.
- **Legacy and modern systems together:** At CVS I analyzed and decoupled monolithic codebases for microservices migration; at Dell I refactored legacy Python test frameworks; ongoing consulting work includes maintaining legacy systems while shipping new cloud-native features.
- **Backend, full-stack, and SQL depth:** Extensive PostgreSQL schema design and query optimization — including cutting financial batch reconciliation from 8 hours to 45 minutes and building Django REST APIs that reduced network provisioning from 4 hours to 10 minutes.
- **Independent product collaboration:** As a Scrum Master and technical lead, I have partnered directly with product and business stakeholders to ship features quickly in regulated, high-stakes environments (healthcare, finance, medical devices).
- **AI as a bonus:** I integrate LLMs and AI development tooling (Cursor, Copilot, LangChain) into engineering workflows where they measurably improve velocity—document classification, test coverage, and code review cycles.

I am based in the Los Angeles area (Pacific time) and available for remote work with CST core hours (9 AM–3 PM CST / 7 AM–1 PM Pacific). I would welcome a conversation about rate, engagement structure (W2/C2C), team context, and next steps.

Thank you for your consideration.

Sincerely,

Cary Jones

Senior Software Engineer
