Hiring Team

Senior–Staff Software Engineer — Excel Execution Platform

USA (Remote)

Re: Senior–Staff Software Engineer — Python & Excel COM Automation

Dear Hiring Team,

I am writing to express my interest in the Senior–Staff Software Engineer role building a server-side Excel execution engine for your financial-services platform. This position sits at an intersection I know well: **production Python backend engineering** and **hands-on Excel COM automation**. I bring 15+ years designing dependable services, plus direct experience at **FileTrek (Los Angeles)** developing VBA macros and COM/Office interop scripts to automate macro-enabled Excel workbooks on Windows — programmatically driving recalculation, extracting structured outputs, and debugging fragile COM-dependent behavior.

My recent work complements that foundation:

- **Python services at scale:** I build clean, tested, observable backend systems in Python — APIs, queue-driven pipelines, retries, and output validation before results are trusted or persisted.
- **Financial & regulated domains:** At Disney, I engineered backend modules for enterprise **financial reporting systems** processing high-volume transaction metrics with strict integrity requirements. At Alan Health, I delivered HIPAA-compliant platforms in audited environments with disciplined change and access controls.
- **Reliability engineering mindset:** I have architected event-driven worker-style processing on AWS (handling **2.5M+ daily events**), optimized failure-prone batch workflows, and owned systems from design through production support — the same ownership model this Excel engine role requires.
- **Cross-stack pragmatism:** I am comfortable navigating legacy and modern systems, collaborating with architects and DevOps on deployment boundaries, and documenting solutions so teams can operate them reliably.

I am transparent that my FileTrek COM automation experience is foundational desktop-era work rather than a current Capital IQ server farm — but it is genuine, hands-on Excel + COM engineering, and I am eager to apply that knowledge alongside my Python platform skills to help wrap a fragile Office stack in robust, observable, scalable services. The problems you describe — session isolation, worker orchestration, output validation, and capacity tuning for monthly-close windows — map closely to the distributed-systems and pipeline work I have delivered in production.

As an honorably discharged U.S. Marine Corps veteran, I bring disciplined ownership and clear communication to complex engineering efforts. I would welcome the opportunity to discuss how my Python backend experience, Excel COM automation background, and financial-systems work can support your team.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Software Engineer
