Hiring Team

Honey (PayPal)

Los Angeles, CA

Subject: Application for Senior Backend Engineer

Dear Honey Hiring Team,

I am writing to express my strong interest in the Senior Backend Engineer role at Honey. With over 15 years of experience building Python backend systems, optimizing relational databases, and operating high-scale services on AWS, I am excited about the opportunity to contribute to the platform behind Honey's shopping and rewards experience. Based in Temple City, I am well positioned for your Los Angeles hybrid team and would welcome the chance to help Honey deliver reliable, performant backend services at scale.

My background aligns closely with the requirements of this role:

- **Python Backend Engineering:** I have deep production experience with **Python** frameworks including **FastAPI**, **Django**, and **Flask**, building RESTful microservices, background processing workflows, and integration layers for consumer and enterprise platforms.
- **Data Systems & Performance:** I routinely design and tune **PostgreSQL** schemas, write complex SQL, and implement **Redis** caching strategies to support high-concurrency workloads. At Disney, I helped optimize financial reporting pipelines processing millions in daily transaction metrics with strict accuracy requirements.
- **Cloud-Native Delivery:** I have extensive hands-on experience with **AWS** (ECS, Fargate, Lambda, RDS, S3), **Docker**, and **CI/CD** pipelines. I have migrated monolithic systems to containerized microservices while improving throughput, reliability, and deployment velocity.
- **Commerce & Cross-Functional Collaboration:** Earlier in my career at KeyIngredient, I built e-commerce backend APIs and automated order fulfillment pipelines. I am comfortable partnering with product, QA, and platform teams in Agile environments, leading code reviews, and mentoring engineers through architectural change.

As an honorably discharged U.S. Marine Corps veteran, I bring disciplined ownership, clear communication, and a strong bias toward dependable systems. I would be thrilled to bring

my backend engineering experience to Honey and help strengthen the infrastructure that powers smarter shopping for millions of users.

Thank you for your time and consideration. I welcome the opportunity to discuss how my experience can support Honey's engineering goals.

Warm regards,

Cary Jones

Senior Backend Engineer
