Budgeting & Pacing Team

Magnite

Los Angeles, CA

Re: Senior Software Engineer

Dear Magnite Hiring Team,

I am writing to express my interest in the Senior Software Engineer role on Magnite's Budgeting & Pacing team. Magnite's scale — powering billions of advertising transactions and helping publishers monetize inventory across every screen — is exactly the kind of high-impact, data-intensive platform work where I do my best engineering. Based in Temple City, I am excited about Magnite's Los Angeles hybrid model and the opportunity to contribute pragmatic, production-ready systems that improve delivery outcomes for your customers.

My experience maps closely to the technical and collaborative demands of this role:

- **Distributed systems at scale:** I have spent 15+ years building backend services and pipelines optimized for throughput, latency, and reliability — including platforms processing **millions of daily events** and enterprise financial systems handling **\$10M+ in daily transaction metrics** with strict uptime requirements.
- **Data-driven engineering:** I apply an analytics mindset to architecture decisions — designing SQL schemas, tuning queries, and building near-real-time ETL pipelines (Airflow, AWS, PostgreSQL, Redis) where measurement, observability, and operational control matter as much as feature delivery.
- **Cloud-native production ownership:** I have extensive hands-on experience with **AWS, Docker**, CI/CD, and cross-team delivery, owning features from inception through deployment and production support.
- **Advertising technology context:** While my primary production language has been Python, I have direct exposure to programmatic media workflows and am eager to deepen JVM-based production work; at Disney I contributed **Java unit test suites** alongside high-scale backend modules during a critical platform migration.

What draws me to Magnite specifically is the intersection of real-time controls, machine learning-informed delivery optimization, and platform reliability — problems that require both rigorous engineering and close partnership with product and partner teams. That is the environment where I thrive: leading features collaboratively, improving systems continuously, and taking responsibility for outcomes in production.

As an honorably discharged U.S. Marine Corps veteran, I bring disciplined ownership, clear communication, and a strong sense of accountability to every team I join. I would welcome the chance to discuss how my distributed systems background, data pipeline experience, and collaborative engineering approach can support Magnite's Budgeting & Pacing platform.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Software Engineer
