Hiring Team

Tatari

Los Angeles, CA

Subject: Application for Senior Backend Engineer

Dear Tatari Hiring Team,

I am writing to express my strong interest in the Senior Backend Engineer position at Tatari. With over a decade of production experience building high-performance backend systems, designing complex data architectures, and integrating artificial intelligence into scalable production environments, I am eager to help Tatari continue to revolutionize TV advertising. Based locally in Temple City, California, I would be thrilled to join your Los Angeles team and contribute to a platform that handles automated, programmatic media buying at scale.

My technical and professional background aligns exceptionally well with the core responsibilities and modern tech stack of this role:

- **Python, SQL, & Modern Data Architectures:** I bring over 10 years of software engineering experience, with expert-level proficiency in **Python** (developing robust, highly available APIs with FastAPI, Django, and Flask). I have deep SQL and data modeling expertise, routinely designing relational and non-relational database structures (PostgreSQL, MySQL, Redis) for optimal storage and high-throughput calculations. My experience includes leveraging **Airflow** to orchestrate complex ETL pipelines to process and analyze massive data footprints.
- **Production LLM & Applied AI Experience:** I have hands-on experience building and deploying applied AI/ML-enabled features. I evaluate and integrate LLM-based systems in production—carefully weighing latency, cost, and reliability trade-offs—utilizing frameworks like LangChain and LlamaIndex to construct RAG architectures, handle state-persistence, and connect to vector databases like Pinecone.
- **Agentic Coding & Modern Tooling:** I strongly believe in using cutting-edge tools to accelerate development velocity while maintaining a high quality bar. I am highly proficient in using agentic coding environments (such as **Cursor**, Copilot, and Claude Code) to streamline debugging, automate test-suite generation, and optimize complex system logic.

- **Empathetic Leadership & Collaboration:** I approach technical architecture and design discussions with pragmatism and empathy. I have a proven track record of leading medium-to-large initiatives from technical design to delivery, working cross-functionally with Product and Data Science teams, and leading peer code reviews. I am passionate about mentoring junior engineers, sharing clean code patterns, and helping team members level up their engineering skills.

As an honorably discharged U.S. Marine Corps veteran, I bring a disciplined, solution-oriented mindset and absolute accountability to everything I build. I am incredibly excited by Tatari's mission, its recognition as a Best Place to Work, and the opportunity to build the next generation of television-first programmatic buying tools alongside a collaborative team.

Thank you for your time and consideration. I welcome the opportunity to discuss how my backend expertise, AI experience, and systems background can support Tatari's continued growth.

Warm regards,

Cary Jones

Senior Software Engineer
