Hiring Team

Vynyl

Re: Senior Full Stack Developer

Dear Vynyl Hiring Team,

I am writing to express my strong interest in the Senior Full Stack Developer role at Vynyl. Your mission — modernizing systems, building new products in regulated industries, and doing it right the first time — aligns closely with the work I have delivered across **healthcare (HIPAA)**, **financial services**, and enterprise platform engineering. I am particularly drawn to Vynyl's emphasis on **AI-augmented engineering done thoughtfully**, not just adopted blindly.

My background maps well to this role:

- **Python & AWS serverless:** I have extensive production experience building backend services in **Python** on **AWS** — including Lambda, ECS/Fargate, S3, RDS, and message-driven processing — designing for scalability, cost efficiency, and operational observability.
- **Event-driven systems:** I have architected pipelines processing **2.5M+ daily events** with retry semantics, idempotent workflow design, and output validation — the reliability patterns event-sourced and distributed systems demand.
- **Full stack delivery:** I have shipped integrated **Python, React, and Node.js** applications, containerized and deployed with CI/CD automation — comfortable across backend services and the JavaScript layers that connect to them.
- **Regulated environments:** At Alan Health, I built **HIPAA-compliant** APIs serving 500k+ users with audit-sensitive access controls. At Disney, I delivered enterprise financial reporting systems with strict data integrity requirements.
- **AI-assisted development — with perspective:** I use **Cursor, Claude Code, and GitHub Copilot** daily and have integrated them into team workflows with measurable results (**35–40% faster delivery**, test coverage **65% → 92%**). I also enforce code review, security review, and IP-safe practices — I can articulate where AI accelerates

engineering, where it fails, and how the role is evolving toward architecture and complex problem-solving over boilerplate.

Vynyl's consulting model resonates with how I work: partner with product and design, translate ambiguous requirements into shippable systems, mentor engineers, and raise the technical bar through reviews and pragmatic decisions. I would welcome the opportunity to discuss how my Python/AWS serverless experience, regulated-industry background, and AI engineering practice can support your clients' most pressing challenges.

Thank you for your time and consideration.

Sincerely,

Cary Jones

Senior Full Stack Developer
