Hiring Team & Engineering Leadership

Circadia Health

El Segundo, CA

Re: Senior Software Engineer Application

Dear Hiring Team at Circadia Health,

I am writing to express my strong enthusiasm for the Senior Software Engineer position at Circadia Health. Circadia's mission to prevent avoidable hospitalizations through contactless sensing and predictive AI workflows resonates deeply with my engineering background. With over 15 years of experience architecting high-throughput Python backends, real-time data ingestion pipelines, and interactive ReactJS applications, I am eager to contribute to a platform that touches tens of thousands of post-acute patients daily and scales to meet your 100k+ growth trajectory.

Throughout my career as a Senior Software Engineer and Technical Consultant, I have specialized in building high-availability cloud infrastructure and mission-critical software systems. Key highlights of how my experience aligns with your requirements include:

- **Scalable Data Ingestion & AWS Architecture:** Proven track record designing AWS cloud infrastructure (RDS, S3, ECS/Fargate, Lambda, Docker) and PostgreSQL database architectures capable of ingesting over 2.5 million daily time-series events with sub-200ms latency and 99.9% availability—directly applicable to processing continuous streaming telemetry from the Circadia Contactless Monitor.
- **Python & API Expertise:** Deep proficiency in Python, FastAPI, Pydantic, Asyncio, and data processing libraries (Pandas, NumPy, SQLAlchemy), paired with strong RESTful API design standards and secure authentication via AWS Cognito.
- **Full-Stack Integration (ReactJS):** Solid experience developing responsive, accessible frontend interfaces in ReactJS, managing complex UI state, and collaborating closely with cross-functional teams to define clean API contracts.
- **TDD, Security & HIPAA Compliance:** Rigorous commitment to Test-Driven Development (TDD) using PyTest, automated CI/CD pipelines (CircleCI), and strict adherence to security best practices for regulated healthcare environments.
- **Disciplined Execution & Systems Thinking:** As an honorably discharged U.S. Marine Corps veteran, I bring a disciplined, systems-oriented mindset focused on proactive technical debt elimination, fault tolerance, and building infrastructure that "just works" at scale.

Located in Southern California (Greater Los Angeles area), the El Segundo location is an ideal fit for me. I thrive in collaborative engineering cultures where high standards, clear documentation, and proactive problem-solving elevate the entire team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my technical expertise in Python backend systems, cloud pipelines, and full-stack software development can support Circadia Health's continued growth and impact on patient care.

Sincerely,

Cary Jones

Senior Software Engineer
