

Cary Jones

Senior Software Engineer – Trading Systems & Infrastructure

Lane 61 Mingde Rd. No. 4, 5F

Xindian District, New Taipei City, 231

cgjonesdev@gmail.com | +886.0910.603.820

Summary

Senior Software Engineer with extensive experience in developing high-performance, low-latency systems for trading infrastructure. Proficient in Python, Rust, and C++, with expertise in designing scalable and efficient trading components, including order routing, market data processing, and risk management tools. Comprehensive knowledge of network programming, systems design, and trading protocols. Demonstrated ability to lead cross-functional teams and collaborate with quantitative researchers to create innovative trading solutions.

Core Competencies

- **Programming Languages:** Python, C++, Rust, Go, Bash, JavaScript, Node.js
- **Frameworks & Tools:** Flask, Django, Kubernetes, Docker, Airflow, Pandas, Numpy
- **Cloud Infrastructure:** AWS (EC2, ECS, Fargate, Redshift), GCP (Compute Engine, Pub/Sub)
- **Systems Design:** Low-latency trading systems, data structures, algorithms, network programming
- **Trading Infrastructure:** Order routing, market data processing, risk management, FIX Protocol
- **Software Development Practices:** Clean Architecture, Agile/Scrum, S.O.L.I.D. Design Principles

Professional Experience

Senior Software Engineer

CVS, Inc. (Remote) | May 2023 – July 2023

- Refactored a legacy monolithic codebase for domain-driven modularization.
- Designed containerized domain modules using Docker and docker-compose.
- Conducted performance testing and provided strategic recommendations for modular architecture.

Senior Software Engineer

Disney Corporation, Inc. (Remote) | October 2021 – November 2022

- Developed software solutions for financial applications, including reporting and cost accounting systems.
- Created Python interfaces for PostgreSQL databases, enabling efficient CRUD operations.
- Conducted unit testing with Java to validate database functions and system integrity.
- Configured and optimized cloud-based trading infrastructure to support high availability.

Python Software Developer & System Architect

CGJSoftware, Inc. (Remote) | July 2019 – October 2021

- Architected and implemented trading backend systems using Flask and Django frameworks.
- Built robust ETL pipelines to process market data from Redis, PostgreSQL, Airtable, and RESTful APIs.
- Utilized Airflow to manage event-driven workflows and improve data pipeline efficiency.
- Designed custom data visualization tools using Pandas, Numpy, and Matplotlib for trading analytics.

Key Accomplishments

- Developed a low-latency order routing system, improving trade execution efficiency.
- Created a modular ORM framework for Python to facilitate seamless database integration.
- Architected scalable trading pipelines utilizing AWS ECS, Fargate, and Kubernetes.
- Designed and implemented risk management and monitoring tools for trading infrastructure.
- Enhanced data processing capabilities with event-driven ETL pipelines and optimized algorithms.

Education & Certifications

- **Associate of Science in Computer Electronics**, ITT Technical Institute, San Diego, CA (2010 – 2013) | GPA: 3.67
 - **Certifications:** CompTIA A+ and Network+, Microsoft Certified Professional
-
