Ashby Engineering Hiring Team

Ashby

Re: Staff Platform Engineer - Americas (Remote)

Dear Ashby Engineering Team,

I am excited to apply for the Staff Platform Engineer role. Ashby's mission — building hiring software that is efficient, delightful, and respectful — resonates with how I think about platform work: build paved roads that let product engineers move fast without sacrificing reliability or security.

My background maps to the problems you describe:

- **Platform engineering that codes:** 15+ years owning AWS infrastructure (ECS, Fargate, Lambda, RDS), PostgreSQL at scale, Docker, and GitHub Actions CI/CD — not just operating systems, but building the tooling and guardrails teams ship through.
- **Event-driven architecture & data:** Designed pipelines processing 2.5M+ daily transactions at 99.95% accuracy with explicit schemas, reconciliation, and observability — the kind of foundation that supports DSL-to-SQL compilers and data warehouse evolution.
- **Reliability & security:** Maintained 99.99% uptime on enterprise AWS backends; built HIPAA-compliant APIs with audit-friendly access patterns. I evaluate risk deliberately and build for edge cases.
- **Async, end-to-end ownership:** I deliver projects independently — from design through production and on-call — and communicate through written specs and code, not meeting-heavy process.
- **AI-augmented engineering:** Daily Cursor/Copilot user who expanded test coverage from 65% to 92% while keeping review standards high — aligned with Ashby's AI-first engineering culture.

I am based in California, available remote across the Americas, and the posted compensation range aligns with my expectations. I would welcome the chance to help Ashby scale infrastructure for the next chapter of growth.

Thank you for your consideration.

Sincerely,

Cary Jones

Staff Platform Engineer
