Oura Engineering Hiring Team

Oura

Re: Senior Backend Engineer (Python) — Remote, U.S.

Dear Oura Engineering Team,

I am writing to apply for the Senior Backend Engineer (Python) role. Oura's mission — helping people understand and improve their health through thoughtful software — aligns with my career focus on building reliable backend systems in health-adjacent, privacy-sensitive domains.

Why I'm a strong match:

- **Python backend at scale:** 15+ years architecting and operating production Python services (FastAPI, Django) on AWS — highly available, well-tested, and maintainable.
- **Own design to production:** I deliver solutions end-to-end including monitoring, documentation, and on-call — pipelines processing 2.5M+ daily transactions at 99.95% accuracy and enterprise backends at 99.99% uptime.
- **Health, privacy & regulation:** Built HIPAA-compliant APIs serving 500k+ profiles; five years in regulated medical device verification at Hospira — I understand auditability and privacy standards.
- **Pragmatic architecture:** I reduce ambiguous problems into clear solutions, automate busywork, and balance short-term delivery with long-term tech debt consciously.
- **Async global collaboration:** Experienced working remotely across time zones; based in US-Pacific (Temple City, CA).

I would welcome the opportunity to help Oura scale the backend platform powering the next generation of wearable health insights.

Thank you for your consideration.

Sincerely,

Cary Jones

Senior Backend Engineer
